

“Let ALL THAT HAS
BREATH
praise You.”
— HEBREW BIBLE, PSALMS 150

Our breath is for singing praise — *not* for breathing smoke and pollution.

But in Maryland, burning methane gas is harming all that has breath.

Below ground, the pipes that bring gas to our homes leak methane, sometimes enough to risk an explosion — and also damage our climate.

Above ground, burning gas indoors hurts the lungs and health of our loved ones, particularly the young and old.

Overhead, burning gas pours heat-trapping pollution into our skies, accelerating the climate crisis.

So in this season, we are using our breath to speak out: for a safer, cleaner, and more efficient future where everything is electric and powered by clean energy.

Today, we ask you to join with congregations across our region in calling on our leaders to help us to electrify everything and shift to cleaner power.

Join us by [filling out this card](#):

Dear Legislator,

I am part of _____, a congregation that is called to care for our neighbors and our climate by moving away from fossil fuels like methane gas in our homes and communities. Methane gas damages the climate we share, and, when burned indoors, it’s unhealthy for everyone who breathes its pollution.

I call on you to help Marylanders electrify at home and shift to cleaner power by strengthening the EmPOWER Maryland program.
